

Install WordPress on Ubuntu(azure)

```
sudo apt update
```

```
sudo apt upgrade -y
```

```
sudo apt install apache2 -y
```

```
sudo apt install mysql-server -y
```

```
sudo mysql_secure_installation
```

```
sudo apt install php libapache2-mod-php php-mysql php-curl php-xml php-mbstring  
php-zip -y
```

```
cd /tmp
```

```
wget https://wordpress.org/latest.tar.gz
```

```
tar xzvf latest.tar.gz
```

```
sudo mv wordpress/* /var/www/html/
```

```
sudo chown -R www-data:www-data /var/www/html/
```

```
sudo chmod -R 755 /var/www/html/
```

```
sudo mysql -u root -p
```

```
CREATE DATABASE wordpress;
```

```
CREATE USER 'wpuser'@'localhost' IDENTIFIED BY 'password';
```

```
GRANT ALL PRIVILEGES ON wordpress.* TO 'wpuser'@'localhost';
```

```
FLUSH PRIVILEGES;
```

```
EXIT;
```

```
cd /var/www/html
```

```
sudo cp wp-config-sample.php wp-config.php
```

```
sudo nano wp-config.php
```

```
define('DB_NAME', 'wordpress');
```

```
define('DB_USER', 'wpuser');
```

```
define('DB_PASSWORD', 'password');
```

- Open a Web Browser: Go to `http://your_vm_ip_address`.

```
sudo apt install certbot python3-certbot-apache -y
```

```
sudo certbot --apache
```
